

Unleashing cooking from galley

Introducing
Halton Marine
MobiChef

Halton

Getting closer to customers

Halton Marine MobiChef with integrated exhaust air recycling unit is a totally autonomous mobile cooking station for electric appliances. The unit is compatible with electric appliances from light-duty table top equipment to traditional 700 and 900 mm deep modular equipment. Cooking appliances are not included in Halton's scope.

Unleashed from any ventilation ductwork, Halton Marine MobiChef brings the cooking closer to customers and where ever it is needed.

The unit is fast and easy to set up with plug and play function.

Move cooking amongst your guest, not grease and odours!

Halton Marine's MobiChef is equipped with the Capture Jet™ technology that "locks" the upper part and the side of the units by creating air curtain efficiently capturing smoke and odours released by the cooking process. The Capture Jets steer the smoke and odours to KSA multi-cyclone filters of the air recycling unit.

The highly-efficient air recycling unit is based on 6-step filtration process.

1. Halton's KSA cyclonic filters and mesh filters
2. Additional disposable pre-filter (EU5, F5 class)
3. ESP filter
4. Absolute filters
5. and 6. Carbon and chemical pellets

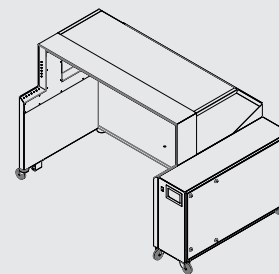

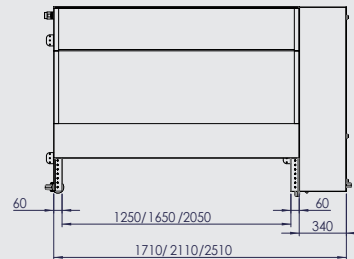

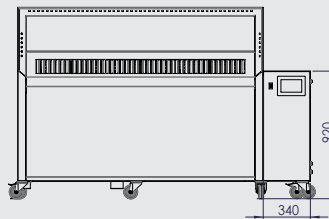

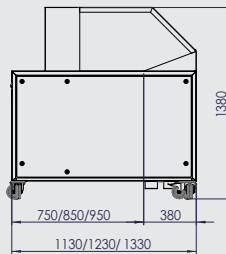

Halton's touch panel is easy to use

The user interface has been designed to manage advanced technologies by use of clear visuals which allows easy control of the main functions. The remaining life time of the filters are clearly displayed so that the maintenance operations can be easily planned.

Halton MobiChef controls ensure that you are always working at the correct airflow. The speed of the fan is adjusted automatically to compensate for filter pressure losses as they become dirty. The exhaust airflow is then kept constant, ensuring that the capture efficiency remains at its maximum level whatever the state of the filters.

Halton Marine MobiChef dimensions. The unit is available in three different sizes. Construction follows USPHS guidelines.
